

Name: JAY ARRE TALOSIG

Subject & Section: CTBASNTL – COM231

Professor: Mr. Eliseo Q. Ramirez

Assignment #1

1. What is the difference between Network Administrator and a Network Engineer?

Network Administrator:

- Manages daily operations of a network.
- Monitors network performance and security.
- Troubleshoots issues and resolves user problems.
- Configures and maintains network devices.

Network Engineer:

- Designs and implements network solutions.
- Plans network infrastructure and upgrades.
- Analyzes network requirements and capacity.
- Works on complex network projects.

2. Site some companies looking for experts in the field of computer networking.

- Cisco
- IBM
- Amazon Web Services
- Microsoft
- Google
- AT&T
- Verizon

3. Identify the different types of Computer Network.

- **Local Area Network (LAN):** Connects devices in a small area, like an office.
- **Wide Area Network (WAN):** Covers a large geographic area, often connecting multiple LANs.
- **Metropolitan Area Network (MAN):** Spans a city or large campus.
- **Personal Area Network (PAN):** Connects personal devices, like smartphones and tablets.

- **Virtual Private Network (VPN):** Provides secure access to a private network over the internet.

4. Identify the different network topologies.

- **Star Topology:** All devices connect to a central hub or switch.
- **Bus Topology:** All devices share a single communication line.
- **Ring Topology:** Each device connects to two others, forming a circular pathway.
- **Mesh Topology:** Devices are interconnected, allowing multiple pathways for data.
- **Tree Topology:** Combines star and bus topologies, with groups of star-configured networks connected to a linear bus backbone.
